

1 **Listing of the Claims**

2 **In the Claims:**

3 None of the claims have been amended, but are presented here for the convenience of the
4 Examiner.

5 1. (Previously Presented) A method for validating information in an electronic document,
6 comprising the steps of:

7 identifying a string having a unique identifier associated with the string;
8 creating a request for information associated with the unique identifier;
9 selecting a reference material source that contains the information associated with the
10 unique identifier;

11 accessing the selected reference material source to obtain the information associated
12 with the unique identifier; and

13 comparing the information associated with the unique identifier to the string to
14 determine whether the string is valid.

15 2. (Previously Presented) The method of Claim 1, wherein the step of comparing the
16 information associated with the unique identifier to the string to determine whether the string is valid,
17 comprises the steps of:

18 if the information associated with the unique identifier matches the string, then
19 determining that the string is valid; and

20 otherwise, determining that the information associated with the unique identifier
21 updates the string.

22 3. (Previously Presented) The method of Claim 1, wherein the step of identifying a string
23 having a unique identifier associated with the string comprises the step of:

24 searching the electronic document for strings having unique identifiers when the
25 electronic document is opened.

26 4. (Original) The method of Claim 1, wherein the string is a name and the selected reference
27 material source is an address book.

28 5. (Original) The method of Claim 1, wherein the string is an address and the selected
29 reference material source is an address book.

30 ///

1 6. (Original) The method of Claim 1, wherein the string is a value associated with a stock
2 symbol and the selected reference material source is a real time stock quote.

3 7. (Previously Presented) A method for providing reference material, comprising the steps
4 of:

5 receiving a request for selected reference material;
6 determining that an identity of a user is relevant to the selected reference material;
7 creating a request for information requesting the selected reference material and
8 identifying the user;
9 selecting a reference material source based upon the request for information;
10 accessing the selected reference material source to obtain the selected reference
11 material; and
12 providing the selected reference material in a manner that is relevant to the identified
13 user.

14 8. (Original) The method of Claim 7, wherein the selected reference material is a set of
15 directions and wherein providing the selected reference material comprises:
16 providing the set of directions so that the directions begin with the identified user's
17 location.

18 9. (Original) The method of Claim 7, wherein the selected reference material source is one of
19 a plurality of reference material sources, and at least one of the reference material sources is a remote
20 server.

21 10. (Previously Presented) The method of Claim 7, further comprising the step of accessing
22 the selected reference material source via a network.

27 ///

28 ///

29 ///

30 ///

1 11. (Previously Presented) A system for integrating reference material into an electronic
2 document, comprising:

3 an application program for creating the electronic document and creating a request for
4 information to obtain selected reference material, wherein the electronic document comprises a string
5 having a unique identifier associated with the string, and wherein the request for information
6 comprises the unique identifier;

7 a reference engine for receiving the request for information from the application
8 program, selecting one of a plurality of reference material sources based upon the request for
9 information, and accessing the selected reference material source to obtain the selected reference
10 material; and

11 the plurality of reference material sources for providing the reference material.

12 12. (Previously Canceled)

13 13. (Previously Presented) The system of Claim 11, wherein the application program
14 compares the selected reference material with the string to determine whether the string is valid.

15 14. (Original) The system of Claim 11, wherein a user's identity is relevant to the request for
16 information, and wherein the request for information comprises an identifier for the user.

17 15. (Original) The system of Claim 11, wherein the request for information includes a
18 selected word and a request for a definition of the word.

19 16. (Original) The system of Claim 11, wherein the application program is a word
20 processing program having a selected language, and wherein the request for information comprises
21 an identifier for the selected language.

22 17. (Original) The system of Claim 11, wherein one of the plurality of reference material
23 sources is a dictionary in a first language and another one of the plurality of reference material
24 sources is a dictionary in a second language.

25 18. (Original) The system of Claim 11, wherein one of the plurality of reference material
26 sources is an address book associated with an electronic mail application program.

27 19. (Original) The method of Claim 18, wherein the request for information comprises a
28 unique identifier associated with an entry in the address book, and wherein the reference engine
29 selects the address book as the selected reference material source based upon the unique identifier.

30 ///

1 20. (Original) The system of Claim 11, wherein the request for information comprises key
2 words summarizing the content of the electronic document.

3 21. (Original) The system of Claim 11, wherein one of the plurality of reference material
4 sources is a remote server.

5 22. (Original) The system of Claim 11, wherein one of the plurality of reference material
6 sources is accessed via a network.

7 23. (Previously Presented) A method for integrating a dictionary into a user interface of an
8 application program, comprising the steps of:

9 in response to a selection of a dictionary control provided in the user interface of the
10 application program, displaying a dictionary interface on a display device;

11 receiving a request for a selected word;

12 creating a request for a definition of the selected word;

13 based upon the request for a definition, selecting a dictionary file;

14 accessing the dictionary file to obtain the definition of the selected word; and

15 providing the definition of the selected word so that the definition is displayed in the
16 dictionary interface.

17 24. (Original) The method of Claim 23, wherein receiving a request for a selected word
18 comprises:

19 receiving the selected word via the dictionary interface.

20 25. (Original) The method of Claim 23, wherein the dictionary interface includes a language
21 control and wherein receiving a request for a selected word comprises:

22 receiving a selected language via the dictionary interface.

23 26. (Original) The method of Claim 23, wherein the dictionary interface includes a language
24 control and wherein selecting a dictionary file comprises:

25 selecting a dictionary file associated with a language specified by the language
26 control.
